/ ALL ABOUT ME

As a front-end developer, I have a deep passion for creating beautiful and interactive user interfaces through coding and right now I am looking for new challenges as a front-end developer with an open mind to learn and work with the usage of new technologies. I have many years of experience in using technologies such as: Typescript, API, JS, HTML and CSS, CSS preprocessors (SASS/LESS), using the GIT version control system. At work, I am primarily looking for solutions to emerging problems that allow me to deepen my knowledge as a developer. In my free time, I am currently deepening my knowledge and polishing my skills in React.
